Alexandra Ene received a Bachelor’s degree at the Technical University of Civil Engineering in Bucharest at the Faculty of Building Services. She further continued her Masters’ Degree at the same university with the specialization of Energy Efficiency of Building Services in Constructions. Currently, she is enrolled as a Ph.D. student at the Doctoral School at TUCEB.

She participated in several student competitions such as REHVA Student Competition in 2019, Bruxelles, Belgium where she won the third place and AIIR Student Competition where she was rewarded with the first prize. She participated as a Decathlete with the Romanian team at the Solar Decathlon Europe 2019, Szentendre, Hungary where they won together the third place. Her current research areas are related to CFD modelling, energy consumption of buildings and building services as well as comfort conditions and occupancy behaviors.

Cătălin Teodosiu, born in Bucharest, Romania, July 22, 1972, received the B.E. degree in Civil Engineering (1996), the M. Sc. degree in Energy Management (1997) from the Technical University of Civil Engineering (Building Services Faculty), Bucharest, Romania and the Ph.D. degree in Civil Engineering (2001) from the National Institute of Applied Science (INSA) of Lyon, France. Between 1996-1998 (Assistant Professor) and from 2004 till now (Lecturer and Associate Professor), he joined the Thermo-Hydraulic and Protection of the Atmosphere Systems Department, Faculty of Building Services and Equipment, Technical University of Civil Engineering, Bucharest.

He performed teaching and research activity also in France, Assistant Lecturer and Researcher, 1998–2004 (University Claude Bernard – Lyon I, INSA of Lyon and CETHIL – The Center for Thermal Sciences of Lyon). He is author and co-author of 4 books and university courses. He published over 100 articles in international and national journals and papers in peer-reviewed international conferences proceedings. He was participant at 8 international research-development-innovation projects (4 as project manager); 1 national research project financed by European Union; 25 national research-development-innovation projects (2 as project responsible). He is also co-author at 2 national technical regulatory documents. He is energy building auditor (Ministry of Regional Development and Tourism – MDRT authorization) and technical expert for HVAC installations (MDRT authorization). His current research interests include CFD (Computational Fluid Dynamics) modeling, focusing on turbulence models and integrated heat-airflow-moisture models; building simulation; high efficiency buildings.
